

JORDAN LEE

GenAI Test Engineer

jordan.lee@example.com +91 90000 12345 Hyderabad, India

SUMMARY

Automation Test Engineer with around 4+ years of experience in Automation Testing, API Testing, and GenAI Testing. Hands-on experience in validating LLM-based applications, RAG systems, AI chatbots, and Agentic AI workflows. Skilled in Prompt Validation, RAG Evaluation, Hallucination Detection, Context Validation, and Tool-Calling Validation. Proficient in **Python, Selenium, Playwright, API Testing, and SQL**. Experienced in using **Promptfoo, DeepEval, RAGAS, and LangSmith** for AI quality evaluation and testing. Strong understanding of Functional, Regression, Integration, and End-to-End Testing in Agile environments, ensuring reliable, scalable, and high-quality AI-powered applications.

EXPERIENCE

NextGen Software Solutions, Automation Test Engineer

09/2022 – Present

Client Engagement: Partner Organization

Hyderabad, India

- QA Engineer with 3+ years of experience in Manual Testing, Automation Testing, API Testing, UI Testing, and AI / GenAI / Agentic AI Testing
- Experienced in testing telecom-domain applications, including chatbot, CRM, BSS, and OSS platforms
- Strong knowledge of functional, regression, smoke, sanity, integration, system, and end-to-end testing
- Hands-on experience in Python, SQL, and JavaScript for automation scripting, backend validation, and test development
- Strong expertise in the Pytest framework with fixtures, parametrization, markers, reusable utilities, and scalable automation framework design
- Proficient in API Testing using Requests and Postman for validating REST APIs, request/response payloads, headers, authentication, status codes, schema, and token-based workflows
- Experienced in UI automation testing using Playwright and Selenium for validating dynamic web applications, chatbot interfaces, cross-browser workflows, and end-to-end user journeys
- Strong hands-on experience in data validation using SQL, JSON validation, and schema validation for backend verification, API contract validation, retrieval validation, and data integrity checks
- Good exposure to prompt / LLM testing using Promptfoo, DeepEval, and LangChain-based workflows for prompt validation, response quality verification, hallucination detection, and prompt engineering validation
- Experienced in RAG testing using RAGAS, LangSmith, and TruLens for retrieval validation, context relevance verification, grounding checks, faithfulness validation, and end-to-end RAG workflow testing
- Hands-on experience in AI safety testing using guardrail tools for safe output validation, policy compliance checks, restricted content handling, and response control validation
- Strong understanding of agentic AI testing, including multi-agent workflow validation, memory validation, context validation, tool-calling validation, prompt chaining validation, autonomous agent testing, and hallucination detection validation
- Good knowledge of monitoring and observability tools such as OpenTelemetry, Prometheus, and Grafana for trace validation, metrics monitoring, dashboard checks, and issue analysis

- Hands-on exposure to performance testing using k6 and Locust for API load validation, concurrent request testing, performance benchmarking, and response time analysis
- Experienced in validating cloud-based applications on AWS, including EC2, S3, RDS, Lambda, and managed AI services, for deployment verification, storage validation, database connectivity testing, serverless workflow testing, and Gen AI service integration testing
- Strong understanding of vector databases, retrieval systems, and backend AI pipelines used in modern Gen AI applications
- Experienced in working in Agile methodology, participating in requirement analysis, test planning, test case design, test execution, defect reporting, automation development, regression execution, and release validation
- Strong ability to validate both traditional applications and AI-powered intelligent systems from functional, technical, and business perspectives

SKILLS

AI / GenAI Testing — Prompt Engineering, LLM Testing, Prompt Testing, RAG Testing, Agentic AI Testing, Promptfoo, DeepEval, RAGAS, TruLens, LangSmith, Guardrails AI, LangChain, LangGraph, ChromaDB, FAISS

SKILLS

Automation & Programming: Python, Selenium WebDriver, Playwright, PyTest, Page Object Model (POM), Data-Driven Testing, Automation Test Design

Manual Testing Expertise: Functional Testing, Regression Testing, Smoke & Sanity Testing, UI Testing, Cross-Browser Testing, User Acceptance Testing (UAT), Defect Reporting & Validation

API & Database Testing: REST API Testing, API Request/Response Validation, Postman, SQL Queries, Database Data Verification

Test Framework & Design Practices: PyTest-based Automation Framework, Page Object Model (POM), Test Case Design

CI/CD & Git tools: Azure DevOps, Jenkins, Git, GitHub, Git Copilot

Operating Systems: Windows, macOS, Linux

Test Management & Agile Process: JIRA, Requirement Traceability Matrix (RTM), Test Planning,

EDUCATION

Bachelor of Science (B.Sc.), ABC UNIVERSITY

2014 – 2019

A specialization in Physics, Chemistry, and Mathematics.

PROJECTS

Telecom CRM Agent Desktop Application, Gen AI-based customer support chatbot

04/2024 – Present

Client: Telecom Industry Client

Role: Software Test Engineer

Application Type: AI Chatbot + Functional CRM/BSS | Testing Type: Gen AI Testing, Functional Testing, UI Testing, API Testing, RAG Testing

Business Use Case: Reduce call-center dependency, provide 24/7 customer support, improve response time, and help customers resolve common telecom issues without waiting for a human agent.

- Validated chatbot responses for billing, recharge, plan, complaint, and SIM activation queries.
- Performed LLM response validation for accuracy, relevance, completeness, and business correctness.
- Tested RAG flow by checking whether chatbot answers were generated from correct telecom FAQs, plan documents, and policy documents.
- Tested hallucination scenarios to ensure the chatbot does not provide incorrect plan, billing, or customer account details.
- Validated chatbot UI using Playwright for message input, response display, typing indicator, quick replies, and escalation button.
- Automated REST APIs using Python Requests / Playwright API for customer lookup, billing, complaint, and ticket-status APIs.
- Performed API validation for status code, headers, payload, token, schema, response time, and business data.
- Performed SQL validation for customer profile, billing data, complaint records, and CRM/BSS data mapping.
- Used Promptfoo, DeepEval, RAGAS, and LangSmith for AI response and RAG quality validation.

Telecom CRM Agent Desktop Application, Tech Stack: Selenium WebDriver, Python, PyTest, Playwright, SQL, Git, Jenkins, API Testing, Agile, Agent Testing

08/2023 – 01/2024

- A desktop-based CRM application used by customer support agents to manage customer accounts, billing information, service requests, complaints, and profile updates. The application integrates with multiple backend systems to provide a unified customer support experience.
- Performed Functional, UI, API, and Role-Based Testing.
- Designed and executed test cases based on business requirements.
- Validated customer account, billing, complaint, and service request modules.
- Executed API testing using Postman and database validation using SQL.

- Logged and tracked defects using JIRA.
- Participated in Agile/Scrum ceremonies and collaborated with cross-functional teams.

Employee Benefits & Expense Management Platform, (Sample Benefits App) | FinTech Domain — Tech Stack: Manual Testing, API Testing, Functional Testing, Smoke Testing, Python, Selenium WebDriver, JIRA, Postman, Requests

09/2022 – 07/2023

- Project Description: A corporate employee benefits platform that enables employees to manage meal and multi-benefit cards, including card activation, digital payments, transaction tracking, notifications, and passbook management.
- Performed Functional, Regression, Integration, and API Testing across key modules, including Login, Card Activation, Transactions, Payments, Notifications, and Passbook.
- Designed, developed, and executed 150+ test cases based on business requirements, user stories, and acceptance criteria.
- Developed and maintained UI automation test scripts using Python, Selenium WebDriver, and PyTest to validate critical business workflows.
- Performed REST API testing using Postman and Python Requests to validate endpoints, request/response payloads, status codes, authentication, and error handling.
- Validated QR Code and Shop ID payment workflows and verified transaction data consistency between the application, APIs, and backend systems.
- Tested customer onboarding and multi-benefit card eligibility workflows, including positive, negative, and boundary scenarios.
- Executed Regression and Smoke test suites for application releases and analyzed automation failures to identify application defects and script issues.
- Logged, tracked, and managed 60+ defects using JIRA and Zephyr and collaborated with developers and business teams through defect triage and resolution.
- Prepared test execution reports, defect reports, and testing status updates while actively participating in Agile ceremonies, including Sprint Planning, Daily Stand-ups, Reviews, and Retrospectives.
